The accessibility checker can be run for your Power Apps app to provide notifications of accessibility violations as well as tips for making it even more user friendly.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
You can use keyboard shortcuts in PowerApps. Keyboard shortcuts give you an alternate way to do common tasks instead of using your mouse or tapping with your finger. They help in seamless navigation of the interface.

Box 2: No
The following software combinations are the supported recommendations for consuming PowerApps with a screen reader:
Windows: Microsoft Edge / Narrator macOS: Safari / VoiceOver Android: PowerApps app / Talkback iOS: PowerApps app / VoiceOver Box 3: Yes
Users who have vision, hearing, or other impairments can use your canvas app more easily and successfully if you consider accessibility as you design how the
app looks and behaves. If you're not sure how to make your app more accessible, you can run the Accessibility checker in PowerApps Studio. This tool not only
finds potential accessibility issues but also explains why each might be a potential problem for users who have a
specific disability and offers suggestions on how to resolve each issue. The Accessibility checker detects screen-reader and keyboard issues for you, and you can
find information about how to fix color-contrast issues by using accessible colors.

NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: business rules
You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.
Box 2: business process flows
Flows Power Automate includes several types of processes, each designed for a different purpose:
> Automated flows. Create a flow that performs one or more tasks automatically after it's triggered by an event.
> Button flows. Perform repetitive tasks simply by tapping a button on your mobile device.
> Scheduled flows. Create a flow that performs one or more tasks on a schedule such as once a day, on a specific date, or after a certain time.
> Business process flows. Ensure that people enter data consistently and follow the same steps every time they work in an app by creating a business process flow.
> Workflows and actions. Dynamics 365 customizers may be familiar with the classic Common Data Service processes, which are workflows and actions.
Box 3: Common Data Model
Model-driven app design is a component-focused approach to app development. Model-driven app design doesn't require code and the apps you make can be simple or very complex. Unlike canvas app development where the designer has complete control over app layout, with model-driven apps much of the layout is determined for you and largely designated by the components you add to the app.

service	Enter the resulting posts into the product database.	Component
trigger	Combine author and link fields into a single field.	Component
flow type	Run flow every hour.	Component

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Trigger
A trigger is something that triggers or starts the workflow. It could be a new file uploaded to a document library, a new item created in the list or an email sent to your Inbox – something that will start (kick-off the workflow).
There are two types of triggers:
> Automatic trigger is pre-programmed into the workflow based on a certain rule (i.e. new document or item created, email sent, etc.)
> Manual Trigger is a trigger initiated by a user. Unlike with automatic trigger above, the workflow will only start when initiated manually by the end user (for example, from the Document Library for a selected file). Manual trigger is only supported for certain types of workflows (i.e. Get feedback from your manager for the selected file)
Box 2: action
An action is something that occurs as a result of the workflow. Box 3: expression
Sometimes users just need to do basic operations like getting the current time, adding numbers together, or replacing a part of a string of text. That's possible inline in any flow action. Microsoft Flow leverages the same Workflow Definition Language used by Azure Logic apps. For new users who are unfamiliar with the expression language, there is an inline help experience that shows how to use each expression as they build out their flow.
Box 4: flow type
There are four different Flow types that you can choose from when starting out. You can create a scheduled flow, automated flow, instant flow, or a business process flow.

https://sharepointmaven.com/3-major-components-microsoft-flow/ https://www.avepoint.com/blog/office-365/office-365-automation/ https://flow.microsoft.com/de-de/blog/use-expressions-in-actions/
